

## Description of the product:

### Features:

VST3 plug-in for Adobe Premiere Pro Windows and macOS (other video editors will follow).

Automatic Volume

All Voice clips will be set to a correct volume.

Automatic Ducking

Music volume goes down during Voice parts.

Compression & Mastering

Creates a fitting loudness for your production.

Good audio shouldn't be a pain

For many video projects the goals are clear:

1. consistent, clean, intelligible vocals (voice-over or recorded on site)
2. music filling silent parts, ducking away during speech
3. total loudness fitting for the target medium

The audio editing and mixing tools in Adobe Premiere Pro and other video editors are very complex, making it difficult to create an adequate mix if you're not an expert. But if speed and efficiency is key let us help you get to a four star mix with close to zero work.

Let the computer handle the tedious work Alex Audio Butler automatically gets your audio up to par. Leaving more time to focus on the story to tell.
